

BROTHER iLINK&LABEL APP

Connecting project data in Fluke Networks LinkWare™ Live with the Brother PT-E550W labeling tool

The iLink&Label app bridges the gap between the office where the project originates and the jobsite where the data is needed for testing and labeling the installation. The result? Cable label printing that's simpler and faster than ever.

PROJECT MANAGER

In the office, the project manager uses Excel or CAD to plan the network infrastructure, then uploads the job's identifiers and test settings to LinkWare Live.

CONTRACTOR

On the jobsite, the testing technician downloads the project test settings and IDs from LinkWare Live into the Versiv™ tester, then uploads results back to LinkWare Live as tests are completed.

SUBCONTRACTOR

On the jobsite, the contractor or subcontractor uses iLink&Label to download a complete group or a subset of identifiers to their smartphone or tablet, then sends them to the Brother PT-E550W labeling tool.

NEW VERSION. NEW FEATURES.

Experience the new iLink&Label version available on iOS.

- Improved filter & sorting capability to easily locate identifiers
- Download virtually any size project or sub-projects into the PT-E550W
- Advanced project control to support subcontractor projects in LinkWare Live
